

# Observability & Security Pipelines Made Easy

Build turnkey data pipelines to seamlessly collect, transform and route data to your Observability and SIEM backends. Calyptia Core simplifies your infrastructure complexity and provides new capabilities for data collection, transformation and multi-routing.

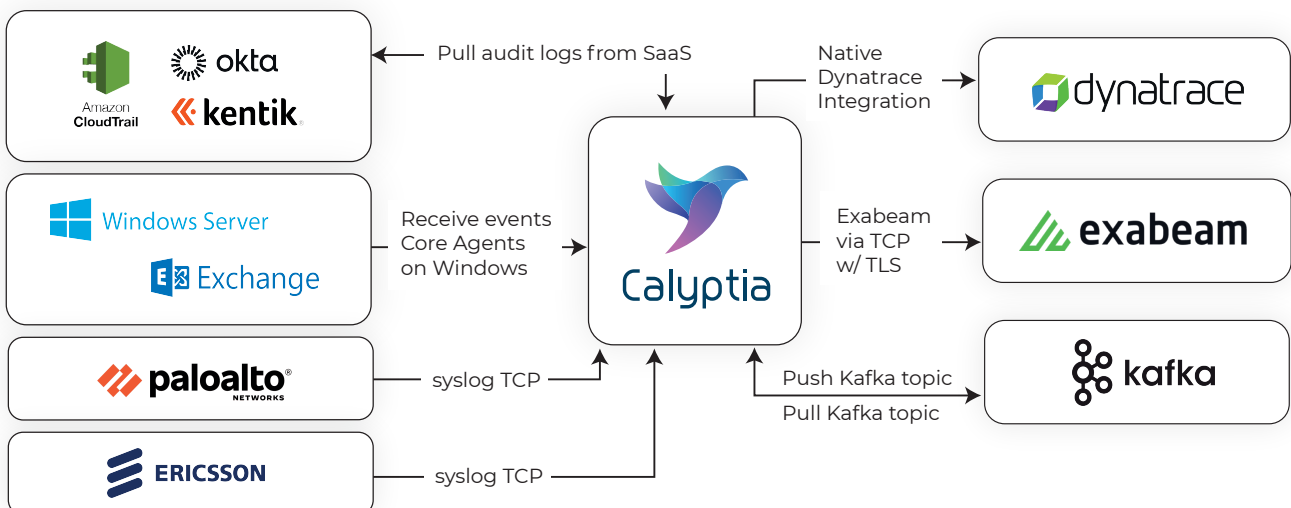

## WITHOUT CALYPTIA CORE:

- Complex pipeline management
- Noisy data and high Observability and SIEM bills
- No in-stream transformations

## WITH CALYPTIA CORE:

- Simplified routing to multiple destinations
- Streamlined pipeline management
- Reduced infrastructure complexity and lower backend bills

# Calyptia, from the creators of Fluent Bit

Calyptia enables you to seamlessly manage your data from any source to any destination. Built for the cloud and containers, we integrate with Kubernetes, OpenTelemetry, Prometheus, and other open standards to enable turnkey data analytics and insights.

## CALYPTIA'S TOP 10 GREATEST HITS

Convert logs to metrics

Add new sources in minutes, not days

Fleet management for agents, control edge deployments with ease

Leverage in-stream transformations to reduce your backend bills

Route to multiple destinations

Enterprise stability and security

Measure the health of your edge deployments

20+ built-in processing rules

Kubernetes namespace logging and monitoring

Reduce dozen of agents to a single agent across all platforms

## Fluent Bit: 11 Billion Docker Downloads

Meet Fluent Bit: a super fast, lightweight, and highly scalable logging and metrics processor and forwarder. Trusted by the biggest cloud providers and top companies globally.
